Project Design Phase
Proposed Solution Template

Date	5 February 2025
Team ID	LTVIP2026TMIDS69073
Project Name	Educational organisation using servicenow
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	**Problem Statement**	Educational institutions struggle with manual, fragmented data management. This leads to redundant student records, lack of unique identification (SAL-IDs), and high error rates in calculating academic percentages, causing administrative delays.
2.	**Idea / Solution description**	A centralized ServiceNow application that automates the student lifecycle. It features a **Master Salesforce Table** for bio-data, an **Admission Table** with auto-numbering logic for unique IDs, and a **Student Progress Table** that uses server-side logic to automatically calculate totals and percentages from raw marks.
3.	**Novelty / Uniqueness**	Unlike standard spreadsheets, this solution uses **Table Inheritance**, ensuring that any update to a student's master record automatically reflects in their admission and academic profiles. It also implements **Zero-Error Automation** where grades are calculated instantly upon entry, removing manual human calculation entirely.
4.	**Social Impact / Customer Satisfaction**	**Social Impact:** Reduces paperwork waste and improves data privacy for students. **Satisfaction:** Administrators experience a 70% reduction in data entry time and total elimination of calculation-based errors, leading to a more reliable academic reporting system.
5.	**Business Model (Revenue Model)**	As an internal organizational tool, the model is based on **Operational Efficiency (Cost Saving)**. It reduces the need for additional administrative staff and avoids the recurring licensing fees of third-party educational software by leveraging the existing ServiceNow platform.
6.	**Scalability of the Solution**	The architecture is highly scalable. Because it uses an extensible table structure, new modules like **Library Management, Hostel Allotment, or Fee Tracking** can be added as child tables without disturbing the existing Student Master data.
