Project Name	educational organisation using servicenow
Maximum Marks	4 Marks

Empathy Map Canvas:

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviours and attitudes.

It is a useful tool to helps teams better understand their users.
Creating an effective solution requires understanding the true problem and the person who is experiencing it. The exercise of creating the map helps participants consider things from the user's perspective along with his or her goals and challenges.

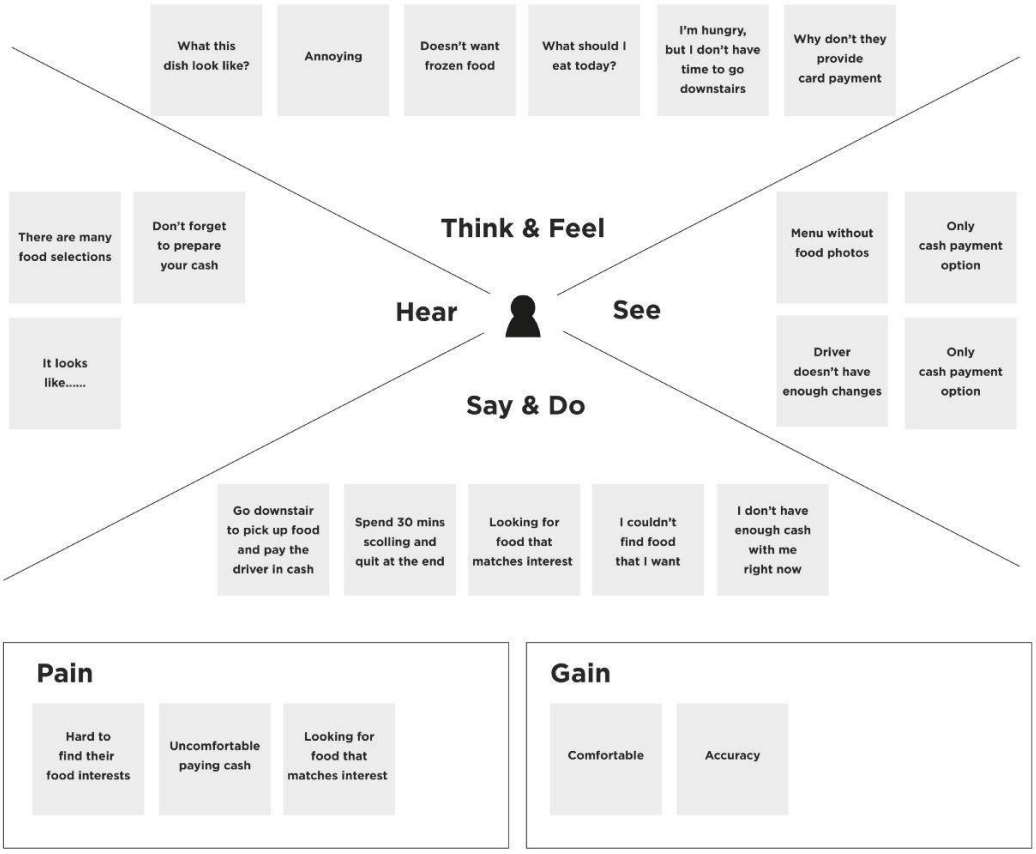
Example: Food Ordering & Delivery Application



Category	Content for Documentation
What does the user THINK & FEEL?	* "I hope I don't lose any student data today." * Worried about the upcoming audit of admission records. * Values accuracy and speed above all else.
What does the user HEAR?	* Principals asking for immediate reports on enrollment numbers. * Parents complaining about slow registration processes. * Peers talking about how "other schools" are using automated software.

What does the user SEE?	* Desks piled high with paper admission forms. * Complex spreadsheets with hundreds of rows. * Modern, clean digital dashboards in other professional tools.
What does the user SAY & DO?	* "I will have the student list ready by tomorrow" (but it takes 5 hours). * Manually cross-checking ID numbers across different files. * Looking for a way to simplify the marking process.
PAIN (Fears/Obstacles)	* **Fear:** Data entry errors leading to wrong student IDs. * **Frustration:** Having to manually calculate percentages for hundreds of students. * **Obstacle:** Lack of a central system to track a student from admission to progress.
GAIN (Wants/Needs)	* **Need:** An automated numbering system (SAL-ID). * **Want:** A visual "Process Flow" to see where an admission stands. * **Success:** Generating a student progress report in one click.
